The screenshot shows the 'Better Regulation' section of the European Commission's website. The header features the European Commission logo and the title 'Better Regulation'. Below the header, a navigation menu on the left lists various topics, with 'Guidelines' selected. The main content area is titled 'Better Regulation Guidelines' and contains text explaining the purpose and structure of the guidelines. It mentions that the guidelines cover the whole policy cycle, from preparation to evaluation, and are based on public consultation exercises. A list of links is provided, including 'Public consultation on the revision of the Commission's Impact Assessment Guidelines', 'Stakeholder Consultation Guidelines', and 'Consultation on the draft Commission Evaluation Policy Guidelines'. On the right side, there are sections for 'Share', 'Search', 'Stay connected' (with links to Facebook, Twitter, and YouTube), 'Latest documents' (listing '19/05/2015 - Better Regulation Package'), 'Help us improve', and a feedback form with fields for 'Find what you wanted?', 'What were you looking for?', and 'Any suggestions?', along with a 'Send' button. The footer indicates the last update was on 11/08/2015 and provides links for 'Legal notice', 'Cookies', 'Contact', and 'Search'.

Better Regulation Guidelines

These guidelines explain what Better Regulation is and how it should be applied in the day to day practices when preparing new initiatives and proposals or managing existing policies and legislation.

They cover the whole policy cycle, from policy preparation and adoption to implementation and application, to evaluation and revision of EU law. For each of these phases there are a number of Better Regulation principles, objectives, tools and procedures to make sure that the EU has the best regulation possible. These relate to planning, impact assessment, stakeholder consultation, implementation and evaluation.

The [Better Regulation Guidelines](#) are structured into chapters which cover each of the instruments of the law-making process. The corresponding [toolbox](#) gives more detailed and technical information.

Better Regulation Guidelines are based on the outcomes of public consultation exercises carried out in 2013 and 2014.

EUROPEAN COMMISSION

Better Regulation "Toolbox"

4. SENSITIVITY AND UNCERTAINTY ANALYSES

Page 391

- Six steps for a global SA:
 1. Select one output of interest;
 2. Participatory step: discuss which input may matter;
 3. Participatory step (extended peer review): define distributions;
 4. Sample from the distributions;
 5. Run (=evaluate) the model for the sampled values;
 6. Obtain in this way both the uncertainty of the prediction and the relative importance of variables.

Sensitivity auditing also
acknowledged

Sensitivity auditing

- Originates from uncertainty & sensitivity analysis
- Addresses model-based evidence used for policy

Saltelli, A., Guimarães Pereira, Â., Van der Sluijs, J.P. and Funtowicz, S., 2013, What do I make of your latinorum? Sensitivity auditing of mathematical modelling, *Int. J. Foresight and Innovation Policy*, 9, 2/3/4, 213–234.

Saltelli, A., Funtowicz, S., When all models are wrong: More stringent quality criteria are needed for models used at the science-policy interface, *Issues in Science and Technology*, Winter 2014, 79-85.

EC guidelines: what do they about sensitivity auditing ?

http://ec.europa.eu/smart-regulation/guidelines/docs/br_toolbox_en.pdf

p. 392

... where there is a major disagreement among stakeholders about the nature of the problem, ... then sensitivity auditing is more suitable but sensitivity analysis is still advisable as one of the steps of sensitivity auditing.

Sensitivity auditing, [...] is a wider consideration of the effect of all types of uncertainty, including structural assumptions embedded in the model, and subjective decisions taken in the framing of the problem.

[...]

The ultimate aim is to communicate openly and honestly the extent to which particular models can be used to support policy decisions and what their limitations are.

p. 393

“In general sensitivity auditing stresses the idea of honestly communicating the extent to which model results can be trusted, taking into account as much as possible all forms of potential uncertainty, and to anticipate criticism by third parties.”

p. 393

“In particular, one should avoid giving the impression of false confidence by “quantification at all costs”. In some cases there is simply not enough data, or the process is too complex, to give a meaningful quantitative prediction.”

Problematic sensitivity analyses

Can I lie with sensitivity analysis as I can lie with statistics?

Saltelli, A., Annoni P., 2010, How to avoid a perfunctory sensitivity analysis, Environmental Modeling and Software, 25, 1508-1517.

OAT is still the most used technique. Out of every 100 papers with SA only 4 are 'global' (non-OAT)

FEATURE 13 April 2016

Statistical and mathematical modelling are at the hearth of science for policy; yet alarm about malpractices.

New Scientist talks of “statistical sausage factory”

LEADER 13 April 2016

Science isn't as solid as it should be – but science can fix it

Unconscious biases and data-torturing are weakening our knowledge base – but unlike politicians and bankers, scientists aren't covering up their failings

Why so much science research is flawed – and what to do about it

Dodgy results are fuelling flawed policy decisions and undermining medical advances. They could even make us lose faith in science. **New Scientist** investigates

An alarming amount of research is flawed
Brett Ryder

**New
Scientist**

A new community for science

From Andrea Salielli, Jerome R. Ravetz and Silvio Funtowicz

We would like to complement your analysis of a crisis in science relating to studies that can't be replicated (16 April, p 5 and p 38). One of us, Jerome Ravetz, predicted in 1971 in his book *Scientific Knowledge and its Social Problems* that the system of internal quality control of science would not easily withstand the evolution toward big science.

Quality in science depends on the existence of a community of scholars linked by norms and standards, and willing to stand by these. The historian Philip Mirowski in *Science-Mart* (2011), fills in the blanks of Ravetz's analysis with details of how science's internal quality control system stalled when "market" replaced "community" as a unifying principle, driven by firms funding research.

The crisis has deep significance, since the contract between science and power is a basis of modernity. Science offers legitimacy to power via its guarantee of "truth". If trust collapses within the research sector, how can public trust be maintained for the many policy-relevant functions of science?

Reform will depend on the emergence of a new "polity" of science including citizen scientists who take responsibility for rooting out corruption of all sorts, scientist-citizens working primarily in the policy arena and concerned journalists and teachers. Issues of ethics and quality, previously largely restricted to coffee-time grumbles, now attract public debates and activist campaigns.

Bergen, Norway; Barcelona, Spain; and Oxford, UK

Quantification and trust

p. 8: “The appeal of numbers is especially compelling to bureaucratic officials who lack the mandate of a popular election, or divine right. Arbitrariness and bias are the most usual grounds upon which such officials are criticized. A decision made by the numbers (or by explicit rules of some other sort) has at least the appearance of being fair and impersonal.”

Theodor M. Porter

Theodore M. Porter, *Trust in Numbers, The Pursuit of Objectivity in Science and Public Life*, Princeton 1995

p. 8: “Scientific objectivity thus provides an answer to a moral demand for impartiality and fairness. Quantification is a way of making decisions without seeming to decide. Objectivity lends authority to officials who have very little of their own.”

Trust, authority and styles of quantification: two different stories

Porter's story: Quantification needs judgment which in turn needs trust ...without trust quantification becomes mechanical, a system, and 'systems can be played'.

Can sensitivity analysis and auditing play a role in all this?

Demystifying the mathematics of uncertainty

As a critical tool for extended peer communities,
e.g. to deconstruct spoof evidence

Opening up of frames

Saltelli, A., Giampietro, M., Ravetz, J.R., 2016, Decalogue of the diligent quantifier. A Pledge.

Excerpts:

Don't quantify at gun point; My license to quantify is also a license not to quantify

Mind frames; mind motivations and power relations

Don't swipe assumptions under the carpet

Each measure need a stable external referent

...

While sensitivity analysis enjoys universal recognition its use is scarce or deficient.

A general malaise? Loss of craft skills? A wider crisis of science's quality control apparatus?

Quantification and trust are linked. High responsibility of the quantifier.

Can sensitivity analysis and auditing help? To demystify spooof evidence, and fight hypocognition? A few SA-specific 'secrets' to help in this direction.

The problem,
the cause, the
solution, **the way**

What can be
done?

Short of a Reformation (!)
practitioners can engage in
upholding good practices in the
discipline

Martin Luther and
Johann Tetzel

COST action DM-SAMO

- Resolve fragmentation (e.g. see US ‘Verification, Validation and Uncertainty Quantification’ (VVUQ))
- Mainstream the discipline (have it taught in syllabuses)
 - Develop syllabuses
 - Prepare a MOOC
- Identify and consolidate practices in relevant problem settings
 - E.g. Taxonomies of settings; prepare a repertoire of exemplary industrial applications; ...
 - A new handbook

Sensitivity analysis books available on **Library Genesis^{1M}**

+

=

COST action DM-SAMO

- Students exchange programs
- Consolidate the SAMO series of conferences and summer schools
- Reach out to other discipline including social scientists, e.g. via the bridges such as sensitivity analysis → sensitivity auditing → quantitative storytelling → ethics of quantification → epistemology → science and technology studies (STS) ...
