Trump's false or misleading claims total 30,573 over 4 years Analysis by Glenn Kessler, Salvador Rizzo and Meg Kelly

January 24, 2021 at 3:00 a.m. EST

The Washington Post Democracy Dies in Darkness

A pandemic of lies?

Get the facts straight!

Better science communication! More independent fact-checking!

The New York Times

Appoint a 'reality czar.'

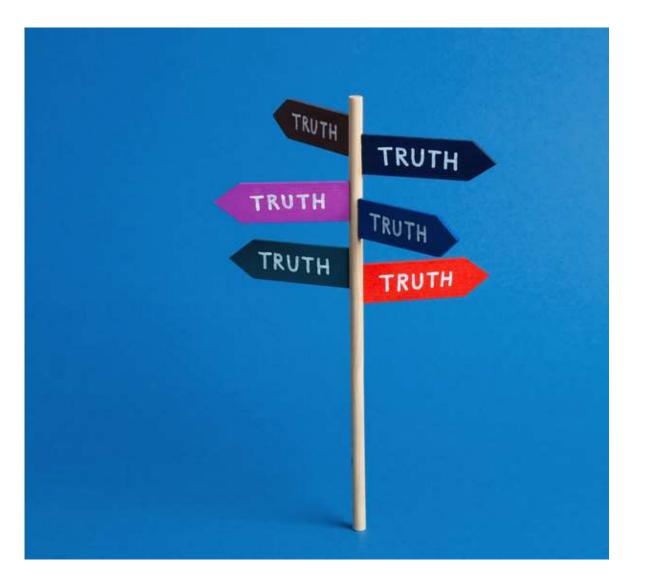

By Kevin Roose

Published Feb. 2, 2021 Updated May 20, 2021

How the Biden Administration Can Help Solve Our Reality Crisis

These steps, experts say, could prod more people to abandon the scourge of hoaxes and lies.

Post truth as a perversion of a well ordered society?

Or the loss of a monopoly on truth?

This is treacherous terrain. The urge to insist on the integrity of the old order is widespread: Truth is truth, lies are lies, and established authorities must see to it that nobody blurs the two.

REALITY: A POST-MORTEM

We know from history that what seemed to be stable regimes of truth may collapse, and be replaced

The Last Judgment (Fra Angelico, c. 1425-1430, San Marco, Florence)

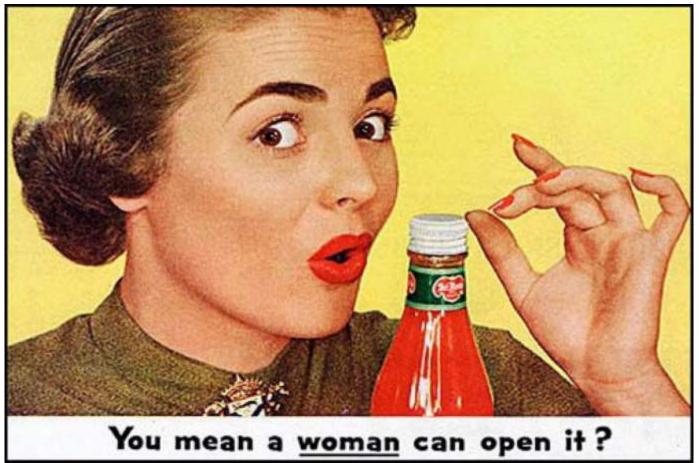

How did we get here?

1) Radio and television, mass communication; unabashed lies become common currency, to the amazement of philosophers

Dialectic of Enlightenment Theodor Adorno & orizineimer

1944

... mass media normalized the application of hyperbole, superlatives, and untestable claims of superiority to the rhetoric of everyday commerce

Source: Tint blog, https://www.tintup.com/

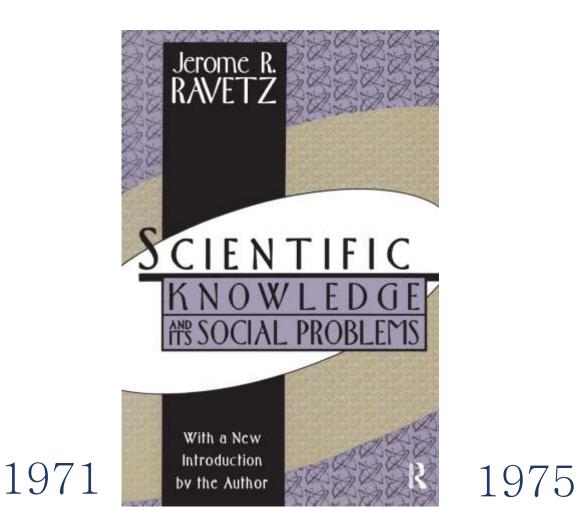

2) Science underwent a massive expansion of its role into the domain of public affairs (XX century)

Linus Pauling debating Edward Teller on the topic of nuclear fallout in a televised broadcast, February 1958

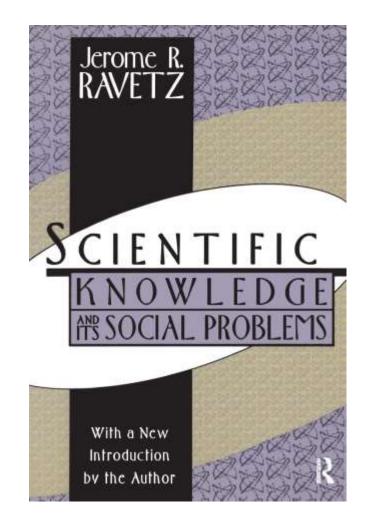

Source: The Pauling blog

Thanks to new instruments and strategies of measurement and quantification the scope for scientific application expanded → blurring of the science policy boundary

AGAINST METHOD Paul Feyerabend Introduced by Ian Hacking There is naturally a great temptation for the leaders of science to attempt to gain the best of both worlds for as long as possible: to extol the virtues of the free search for truth to one audience, and to promise useful services to another (p. 420)

- Science deals with the irreducible uncertainties of complex and messy problems at the intersection of nature and society
- Science is used for taking decisions that are themselves value-laden and contested

Futures

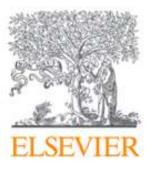

Volume 25, Issue 7, September 1993, Pages 739-755

Science for the post-normal age

Silvio O. Funtowicz, Jerome R. Ravetz 🖾

The fathers of post-normal science were among the first to realize that science as used as input to policy decision had become inherently contestable, and that a new approach was needed

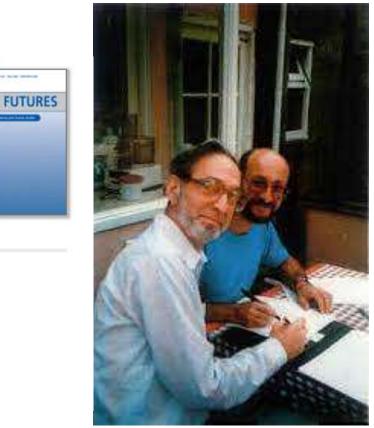

Futures

The end of "Noble lies"

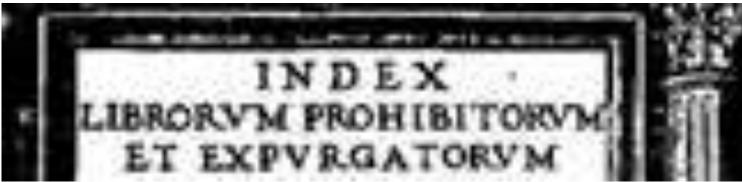

Can we learn from history?

The printing revolution (initiated c. 1439):

Millions of books are printed in a few years, from treatises of demonology to translations of bibles.

- The printing press permits religion, music and pornography to roam free The church looses its monopoly on printed material; reacts with its index of forbidden books; it is eventually unable to contain change

Source:

The path is open to Luther's theses (1517), to reformation, religious wars, eventually to the birth of the nation state

To a religious observer living through the beginning of the Reformation, all this might have appeared as the end of an era, and the beginning of a threatening period of heterodoxy, heresies, and confusion

XV-XVI century: the beginning of fake news?

MALEFICARVM SVB QUAESTIONE DESTRIGIBUS

The public hanging of witches in Scotland. Coloured engraving, 1678. Illustration: The Granger Collection/Alamy

More witches were killed in this period than in any other in history Many would say that it was the Reformation itself that did away with fake news, such as

- Indulgencies paying to shorten stay in Purgatory
- Jews eating Christian children
